

-

EDUCATION

- **National Institute Of Technology Warangal (NIT-W)**
 - **B.Tech In Engineering | CGPA: 7.61 | C++, Python, R, Machine Learning**
 - **Minor In Management | CGPA: 7.00**
 - **Timeline: 2021-2025**
 - **Agile Methodology**
 - **Timeline: 2022-2025**
-

PROFESSIONAL EXPERIENCE

Data Analyst Intern |

Axis Bank

- **Duration:** May 2024 - July 2024
 - **Location:** Mumbai, Maharashtra
 - Produced a robust automated risk report that enhanced real-time risk assessment using SQL, which led to a reduction in financial risks and losses.
 - Analyzed databases handling data of over 50 million users, identifying key trends and insights to support strategic decisions.
 - Created business snapshots for over 20 loan programs, which analyze 25% of the company's total risks.
 - **Certificate**
-

PROJECTS

Stock Movement Predictor |

PyTorch, LSTM, Praw, yfinance

- Built an end-to-end stock movement prediction system using Reddit sentiment data and scores scraped via PRAW from 15K+ r/WallStreetBets posts.
- Developed a custom 2.1M+ parameter LSTM-based attention model in PyTorch to process post embeddings, temporal context, and metadata (e.g., upvotes, sentiment).
- Built 10K+ sample dataset linking Reddit sentiment with stock movement scraping real-time yfinance data.
- **Link**

Anime Face Generator using DCGAN |

General Adversarial Networks, torchvision, Kaggle Datasets

- Trained a Deep Convolutional General Adversarial Network on 63K+ images to generate 128x128 anime faces, achieving realistic outputs after 50 epochs.
- Built generator/discriminator with 400K+ parameters, used BCE loss, Adam optimizer, and batch size of 128 for stable training.
- Generated ~2,500 sample images, applied Tanh and BatchNorm, and enabled 2x faster training with GPU support and device-agnostic data loaders.
- **Link**

Fashion Trend Analyzer |

PyTorch, ResNet50, CLIP, Praw, Pandas, Numpy

- Built a PyTorch-based deep learning pipeline for fashion trend classification and segmentation, analyzing trends on 15K+ Reddit posts and images scraped via PRAW.
- Used OpenAI's CLIP model for image classification based on natural language prompts and images.
- Performed trend analysis using sentiment analysis (TextBlob) and engagement metrics to quantify the popularity of 10+ clothing items, visualized via interactive plots.

GMail Assistant using Model Context Protocol |

Python, MCP, GMail API

- Built a Gmail assistant using the MCP Python API.
- Coded 30+ tools to handle tasks, analyze inbox, gain insights, flag spam, and visualize trends with daily email volume plots and reply heatmaps.
- **Links**

RESEARCH

- Replicated GPT-2 architecture from scratch using PyTorch, achieving CIFAR-10 score of 92%.
- **Paper Implementation:** "Attention is All You Need" — read and implemented encoder-decoder attention model in PyTorch from scratch.

SKILLS

- **Languages:** C++, JavaScript, Python, R, SQL
- **DevOps and Tools:** Git, GitHub, SDLC
- **Frameworks and Web Technologies:** Node.js, Express.js, PyTorch, TensorFlow
- **Databases:** MongoDB, MySQL, Oracle SQL Developer

- **Hard Skills:** Attention Mechanisms, Natural Language Processing, Model Context Protocol, Neural Networks, Generative Neural Networks

+1

- **Areas of Interest:** Artificial Intelligence, Machine Learning, Computer Vision, Deep Learning
-

+4

CERTIFICATIONS AND COURSEWORK

- **Gen AI Language Modelling with Transformers:** Certificate
- **Computer Networks Google:** Certificate
- **Gen AI Architecture & Data Preparation IBM:** Certificate
- **C++:** Certificate
- **Gen AI Engineering & Fine-Tuning IBM:** Certificate
- **Gen AI NLP & Language IBM:** Certificate
